

A13J

The A13J is a lightweight alternative drive control you can use with your eyes. This device is designed for people who can no longer use the joystick on their powered wheelchair and do not have a supported eye gaze device.

The A13J uses eye gaze technology on a battery powered tablet computer in a protective case with handle and mounting interface. The A13J provides directional buttons and when configured to do so can be used to control seating and driving on the powered wheelchair.

Product Code: A13J

MSRP: \$12,650
